J. Vygen, Bonn
R. Weismantel, Magdeburg
G. Woeginger, Twente

Discrete Optimization publishes research papers on the mathematical, computational and applied aspects of all areas of integer programming and combinatorial optimization. In addition to reports on mathematical results pertinent to discrete optimization, the journal welcomes submissions on algorithmic developments, computational experiments, and novel applications (in particular, large-scale and real-time applications). The journal also publishes clearly labelled surveys, reviews, short notes, and open problems. Manuscripts submitted for possible publication to **Discrete Optimization** should report on original research, should not have been previously published, and should not be under consideration for publication by any other journal.

DISCRETE OPTIMIZATION, a new addition to the DISCRETE MATHEMATICS and DISCRETE APPLIED MATHEMATICS family of journals published by Elsevier.
